

Research project

The candidate should provide a concise (1 page – A4) report related to the research project concerning the call 'SINEUP RNAs: a new platform for treating haploinsufficiency in Autism Spectrum Disorders (ASD)'. The research project should be written in English.

Specifically, we ask the candidate to:

1. Highlight the strength and limitations of the SINEUP approach
2. Discuss the technical challenges of working with induced Pluripotent Stem Cells (iPSC)
3. Explore different ways to model Autism-related mutations.
